

PROFILE

AI Engineer building systems that have to be right in operation, not only in evaluation. I work the full path — dataset preparation, model evaluation, backend integration, business rules, and the human review paths that catch what the model misses.

Open to: AI Engineer · Applied AI / Machine Learning Engineer. Remote, hybrid or relocation. Graduated July 2026, available immediately.

PROFESSIONAL EXPERIENCE

- AI & Software Engineer — Final-Year Engineering Project

Feb 2026 - Jul 2026

Essilor SIVO (EssilorLuxottica)

Sfax, Tunisia

- Owned requirements, AI architecture, dataset preparation, model evaluation, backend integration and QA for confidential PRECAL form processing — YOLO11 detection, EfficientNetV2-S classification, TrOCR and GLM-OCR recognition, business rules and human review.
  - Reached 95.16% mAP@50 — and set the confidence threshold below which a form goes to a person instead of automatic processing.

Python · YOLO11 · EfficientNetV2-S · TrOCR · GLM-OCR · RapidFuzz
- Backend Developer Intern

Jun 2025 - Oct 2025

Altavo Partners

Remote · Paris, France

- Developed Node.js API services, PostgreSQL persistence and Hedera SDK integration for a distributed-ledger platform, remotely with a French-speaking team.

Node.js · PostgreSQL · Docker · Hedera SDK · REST APIs
- Full-Stack Developer Intern

Jun 2024 - Aug 2024

Infotech Consulting Services (ICS)

Sfax, Tunisia

- Built administration workflows for university schedules, examinations, students, classes and resources.

Laravel · Vue.js · PHP · MySQL

SELECTED PROJECTS

Fytrak — Coaching Platform

Personal project · built solo · 2025 - 2026

Three-role platform (trainee, coach, admin) built end to end: React Native app, admin console, 15 Cloud Functions, three languages including RTL. 698 lines of Firestore security rules, with a test suite that runs them against the emulator — an access rule nobody has tested is an assumption, not a rule.

TypeScript · React Native (Expo) · Firebase · Cloud Functions · i18n

ORYS — Multi-tenant Business Platform

Team of 4 · 2025 - present · responsible for the AI layer

Built the model-provider abstraction: one interface, two adapters — OpenAI-compatible and Anthropic Messages. Derived both from the vendors' published SDK types rather than their docs, exposing three defects the existing tests all passed; two would have reached production.

TypeScript · Anthropic & OpenAI SDKs · Zod · Vitest

SmartWarehouse AI

Personal project · 2025 · public repository

Logistics agent deciding gate assignment from plate recognition, separating facts (SQL) from rules (vector retrieval). A retrieval evaluation exposed that the policy documents driving those decisions were never retrieved; the fix moved recall@5 from 33% to 44%.

FastAPI · Next.js · ChromaDB · YOLO · RAG · Docker

TECHNICAL SKILLS

- Machine learning

Python, PyTorch, TensorFlow, deep learning, neural networks, pandas, scikit-learn
- Computer vision

YOLO, YOLO11, EfficientNetV2, OCR, TrOCR, object detection
- Generative AI & NLP

LLMs, RAG, AI agents, transformers, ChromaDB, vector databases
- Backend & data

FastAPI, Node.js, NestJS, REST APIs, PostgreSQL, MySQL, MongoDB, Firebase
- Delivery & web

Docker, Linux, Git, CI/CD, TypeScript, Next.js, React, React Native

EDUCATION

- National Engineering Degree in Computer Engineering

Software Engineering & Business Intelligence · IIT, Sfax

Graduated · 18 July 2026
- Preparatory Classes for Engineering Schools

Preparatory Institute of Sfax (IPEIS)

2021–2023

CERTIFICATIONS & LANGUAGES
